

IATF 16949 QUALITY MANAGEMENT STATEMENT

Mold In Graphic Systems® / Polyfuze® Graphics Corp.

RESPONSE TO PARTNER IATF 16949 CERTIFICATION INQUIRIES

Mold In Graphic Systems® / Polyfuze® Graphics Corporation specializes in proprietary Polymer Fusion Labeling Technology designed for permanent labeling of polyolefin thermoplastics used in demanding industrial and automotive environments.

Polyfuze® technology has been validated and utilized by multiple automotive OEMs and Tier-1 suppliers for applications requiring durable, permanent labeling on polyolefin components.

During validation trials conducted by General Motors and their suppliers, Polymer Fusion Labeling Technology demonstrated the ability to meet stringent durability requirements for thermoplastic elastomer (TPE / TPV) and polyolefin components used within automotive programs. As a result, Polyfuze has been accepted as a specialty supplier supporting multiple automotive platforms.

Because Polyfuze provides a proprietary material and process technology rather than traditional component manufacturing, our organization operates outside the scope of formal IATF 16949 certification requirements.

Polyfuze previously achieved ISO 9001:2015 certification in 2020, which was maintained for one year. The company later elected not to renew the certification as our highly specialized production model and proprietary processes are better supported through internally managed quality systems.

Despite not maintaining IATF certification, Mold In Graphic Systems® / Polyfuze® Graphics Corporation maintains a comprehensive Total Quality Management (TQM) system focused on:

- Continuous improvement
- Lean manufacturing methodologies
- Lean Six Sigma Black Belt and Green Belt leadership development
- Customer-specific quality requirements and validation processes
- Internal process controls and documented procedures

Polyfuze currently supports multiple Tier-1 automotive suppliers and programs across more than 35 vehicle platforms, demonstrating the reliability and performance of our technology in demanding automotive environments.
