

ISO QUALITY MANAGEMENT SYSTEM STATEMENT

Mold In Graphic Systems® / Polyfuze® Graphics Corp.

RESPONSE TO PARTNER ISO CERTIFICATION INQUIRIES

Mold In Graphic Systems® (MIGS) / Polyfuze® Graphics Corporation specializes in proprietary Polymer Fusion Labeling Technology designed for permanent labeling of polyolefin thermoplastics used in demanding industrial and automotive environments.

In 2020, MIGS / PGC achieved ISO 9001:2015 certification, which was maintained for one year. Following an internal review of our manufacturing model and operational structure, the company elected not to renew the certification. Our proprietary and highly customized production processes operate outside the traditional ISO audit framework and were determined to be better supported through internally managed quality systems.

Despite not maintaining active certification, MIGS / PGC continues to operate under a comprehensive Total Quality Management (TQM) system designed to maintain ISO-level quality discipline and continuous improvement throughout our organization.

Our quality management approach includes:

- Customer-focused process management
- Continuous improvement practices
- Lean manufacturing methodologies
- Lean Six Sigma leadership development including Black Belt and Green Belt certifications
- Documented internal quality procedures and process controls
- Performance validation through internal and third-party testing programs

MIGS / PGC remains committed to delivering consistent product quality, operational efficiency, and customer satisfaction across all industries we serve.

For partners requiring additional information, Quality Management System documentation and internal quality procedures are available upon request, along with details regarding our LEAN initiatives and continuous improvement practices.
